Northwind Signal - Ideal Customer Profile & Go-To-Market Brief

Company: Northwind Signal Ltd. is a 38-person B2B SaaS company based in Austin, Texas, founded in 2021. We sell Northwind Pulse, a revenue-operations analytics platform that unifies CRM, billing and product-usage data for mid-market software companies.

Product category: Revenue intelligence / RevOps analytics. Core modules: pipeline forecasting, churn-risk scoring, expansion-signal alerts and a board-ready reporting layer.

Tech stack and integrations: Salesforce, HubSpot, Snowflake, BigQuery, dbt, Segment, Stripe, Slack. Built on Next.js, Postgres and Python; SOC 2 Type II certified.

1. Target buyer

Primary buyer: VP of Revenue Operations or Head of Sales Operations at a B2B software company with 100 to 1,000 employees and 20 to 150 quota-carrying reps.

Secondary buyers: Chief Revenue Officer, VP Sales, Director of Customer Success. Economic buyer is the CRO; the champion is almost always RevOps.

Industries: B2B SaaS, fintech software, cybersecurity vendors, HR tech and developer tools.
Regions: United States, Canada and the United Kingdom first.

2. Pain points we solve

Forecast misses: reps and managers submit forecasts from gut feel; finance sees variance of 15 to 25 percent against plan every quarter.

Data silos: CRM, billing and product-usage data live in different tools, so nobody can see which accounts are expanding or about to churn.

Manual reporting: RevOps spends 2 to 3 days each month assembling board decks from spreadsheets.

Late churn detection: customer success hears about a cancellation after the renewal notice, not 90 days before.

3. Competitors and alternatives

Direct competitors: Clari, Gong Forecast, BoostUp and Aviso. Adjacent tools: Salesforce Einstein, HubSpot forecasting, 6sense and ZoomInfo for intent data.

Why we win: faster setup (under two weeks versus two months), transparent scoring that RevOps can audit, and pricing that fits mid-market budgets.

Where we lose: very large enterprises that want a single suite from one vendor, and teams that only need basic CRM dashboards.

4. Buying signals and outreach angles

Signals: new CRO or RevOps hire in the last 90 days, a funding round, a CRM migration, public job posts for forecasting or sales analytics roles, and G2 research on revenue intelligence.

Messaging: lead with forecast accuracy and time saved on board reporting. Proof points: a customer cut forecast variance from 22 percent to 6 percent in two quarters.

Deal size: 30,000 to 90,000 USD annual contract value, 45 to 75 day sales cycle, pilot offered for 30 days.
